IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicants: TOMAS DIEZ ET AL. Docket No.: 02-171
Serial No.: 10/082,874 Examiner :
Filed : February 26, 2002 Art Unit : 2641
For : CONTROL MODULE FOR HVAC SYSTEMS

900 Chapel Street
Suite 1201
New Haven, CT 06510-2802

INFORMATION DISCLOSURE STATEMENT

Hon. Commissioner of Patents & Trademarks
United States Patent and Trademark Office
Washington, DC 20231

RECEIVED

NOV 07 2002

Technology Center 2600

Dear Sir:

In accordance with the requirements of 37 C.F.R. 1.97 and 1.98, Applicants hereby submit the prior art documents cited in the corresponding International Search Report listed hereinbelow, copies enclosed.

1. U.S. Patent No. 5,809,462, Patented September 15, 1998, by Nussbaum, for METHOD AND APPARATUS FOR INTERFACING AND TRAINING A NEURAL NETWORK FOR PHONEME RECOGNITION. This reference relates to a method for training a neural network comprising the steps of: inputting an audio signal including a training set of phonemes; dividing the signal into segments, each segment representing a phoneme; identifying each segment; transforming segments into time independent vectors; verifying that at least one

of the segments or vectors represents to a degree acceptable to an operator a corresponding one of the training set of phonemes; and training the neural network using the time independent vectors.

2. U.S. Patent No. 6,021,387, Patented February 1, 2000, by Mozer et al., for SPEECH RECOGNITION APPARATUS FOR CONSUMER ELECTRONIC APPLICATIONS.

This reference relates to a spoken word or phrase recognition device. The device does not require a digital signal processor, large RAM, or extensive analog circuitry. The input audio signal is digitized and passed recursively through a digital difference filter to produce a multiplicity of filtered output waveforms. These waveforms are processed in real time by a microprocessor to generate a pattern that is recognized by a neural network pattern classifier that operates in software in the microprocessor. By application of additional techniques, this device has been shown to recognize an unknown speaker saying a digit from zero through nine with an accuracy greater than 99%. Because of the recognition accuracy and cost-effective design, the device may be used in cost sensitive applications such as toys, electronic learning aids, and consumer electronic products.

3. Japanese Publication No. 4-327748, Published November 17, 1992, for CONTROLLER FOR AIR CONDITIONER. Although this reference is in the Japanese language, the drawing are believed to be clear. An English language Abstract is attached hereto and reads as follows: A main part of a controller for an air conditioner is constituted or a remote controller 1 and an indoor unit controller 2. The remote 1 is provided with a microphone 3 through which an indication word is inputted in voice, a plurality of key switches 4 through which various kinds of signals are inputted, a plurality of LSD displays 5 and the like. A voice recognizer LSI 6 outputs various kinds of control signals to be inputted into a receiver 22 of the indoor unit controller 2. A microcomputer is provided at a central position of these instruments. On the other hand, the indoor unit controller 2 is provided with another microcomputer 21 for driving and controlling various kinds of functions of the air conditioner, and further, the receiver 22, the LED display and the like are connected around the microcomputer 2. Thus whether the command word can be recognized or not can be informed to an operator visually per voice.

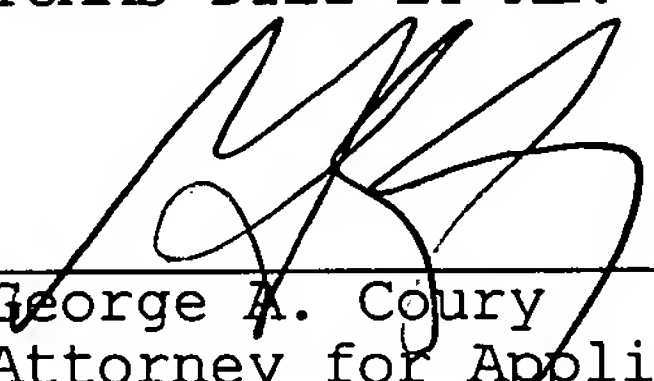

Copies of the foregoing patents are enclosed herewith along with a listing on form PTO-1449.

The undersigned submits the above-identified references for independent consideration by the Examiner and does not make any admission that these references are or are not material to the present invention or that these references are or are not prior art with respect to the present invention.

If any fees are required in connection with this case, it is respectfully requested that they be charged to Deposit Account No. 02-0184. A duplicate copy of this paper is enclosed herewith in connection with any deposit account charge.

Respectfully submitted,

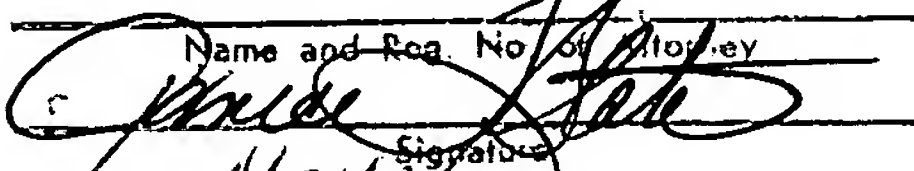

TOMAS DIEZ ET AL.

EXAMINER: Initial if reference considered, whether or not citation is in conformance with MPEP 609. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant.

¹ Unique citation designation number. ² See attached Kinds of U.S. Patent Documents. ³ Enter Office that issued the document, by the two-letter code (WIPO Standard ST.3). ⁴ For Japanese patent documents, the indication of the year of the reign of the Emperor must precede the serial number of the patent document. ⁵ Kind of document by the appropriate symbols as indicated on the document under WIPO Standard ST. 16 if possible. ⁶ Applicant is to place a check mark here if English language Translation is attached.

Burden Hour Statement: This form is estimated to take 2.0 hours to complete. Time will vary depending upon the needs of the individual case. Any comments on the amount of time you are required to complete this form should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, Washington, DC 20231. **DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Assistant Commissioner for Patents, Washington, DC 20231.**
